Enhanced tools let you see data your way

Interactive multi-program reporting for ResMed Astral™ and ResMed Stellar™ patients

Get a broader perspective of your patients' overall therapy with program delineation in AirView for Ventilation. Interactive multi-program reporting allows you to view detailed therapy trends within each individual program. The interactive nature of the tool allows you to easily visualize and detect variations in therapy trends.

Program delineation shows detailed therapy trends

Featuring an intuitive interface, AirView for Ventilation offers upgraded functionality designed to make it easier to find the clinical data you need to quickly modify therapy plans and to address signs of disease progression.

Dynamic detailed data reporting

Your ventilation care patients are dynamic; their clinical data should be dynamic, too. With dynamic detailed reporting within AirView for Ventilation, you can visualize variations in therapy trends over time. Rather than a static report where fluctuations in the patient data may not always be apparent, these on-screen tools allow you to:

- **Save time.** Quickly access the data you need, when you need it.
- **See more.** Zoom in and out to view detailed data trends within a one-hour window versus a 24-hour window.
- **Get more precise.** Hover over specific data points on graphs to obtain exact values during clinical analysis.
- **Timely intervention.** See which alarms were triggered, when they were triggered and which program they were triggered in.
- **Visualize ventilation data.** View settings for each program as well as dynamic therapy trends for key ventilation parameters in the clinical interface. Recent additions include: respiratory rate and SpO₂ (oxygen saturation).
- **Easily share data.** Create customized ventilation reports with relevant patient therapy data that are easily shareable via the print button.

Management by exception

The management by exception feature has automated patient triage for improved clinical reporting. With customizable rules and thresholds at the individual patient level, you can control how you want your patients managed and when to have an issue escalated. The system will alert your patients' HMEs so they can easily prioritize patients and intervene when there are signs of trouble to help improve care.

Interactive reporting and timely care are now just one click away

ResMed AirView™ for Ventilation is a completely reimagined platform that will transform ventilation patient management. Combining clinical detail with digital automation, AirView for Ventilation offers enhanced functionality that can help you and your patients' home medical equipment provider (HME):

- **Intervene when there are signs of progression.** Complex patients who are experiencing disease progression or other health issues impacting respiratory function can be proactively identified for timely interventions, helping prevent unnecessary office visits and hospitalizations.
- **Get a fuller picture.** Flexible reporting allows you to dynamically view variations in therapy data for individual programs, both at the summary level and detailed level.
- **Manage ventilation patients in one location.** Management by exception digitally automates patient triage and allows HMEs to standardize care for ventilation patients.

Integrated patient care

Make your patients' HME a trusted partner in their care. With AirView for Ventilation, you can share the same detailed reporting for complex patients with COPD, neuromuscular disease and other conditions to help improve collaboration. Working together with your HME, you can proactively intervene – often before the patient is even aware of an issue – and help to reduce office visits and improve patient care.
