

Add Physician to Patient Record

Description:

You can add or remove a physician from a patient record. This enables the physician to view the patient's data.

To add a physician:

1. From the **Patient details** tab, select **Physicians**.
2. Click **Add Physician**.
3. Enter the physician's name, license number, organization name, or address (state abbreviation, city, and zip/postal code) and click the **Search**.
Note: If the physician's name is not listed, contact ResMed Customer Service
4. Select either:
 - a. Organization name - allows all physician clinical users in the selected organization to view this patient's data
 - b. Physician's name—associates this specific physician with the patient's file and allows all physician clinical users within the physician's organization to view the patient's data.
5. Click **Add** to complete the setup, or **Back** to select another physician. Click **Cancel** to return to the Patient details screen.

Note: Multiple physicians can be added to each patient record

To remove a physician from the patient's file:

1. From the **Patient details** tab, select **Physicians**.
2. Click **Remove** under the physician's name.
3. Click **Yes, remove physician**.
Note: Removing a physician from the patient's file does not delete the physician's details from AirView network. This allows you to reassign the same physician to other patients, if necessary.
