Create a New Patient Record
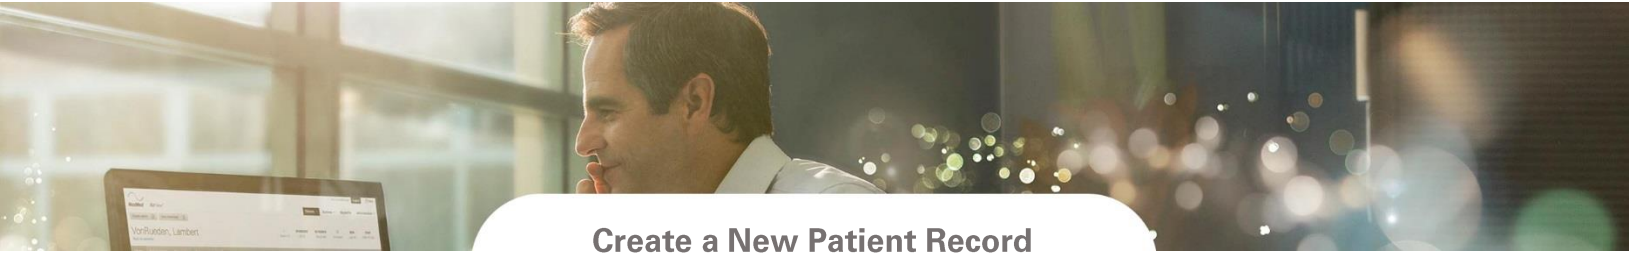

Description:

You can enter new patient details into AirView. Once a patient's record is created, you can download home sleep test device data, generate a diagnostic report, and associate a device to a patient.

To create a patient record:

1. From the **Diagnostic patients** screen, click **New patient**.

2. Enter the following details:

   - **Clinical details**

     - **Clinical user:** Defaults to currently logged-in user. Click the drop-down arrow to select another user who will accept the patient.

     - **Physician:** Select a physician who is linked to share the patient record for interpretation.

   - **Patient details**

     - Name

     - Date of Birth

     - Patient ID (optional)

   - **Healthcare details** (optional)

   - **Contact details** (optional)

   - **Additional details** (optional)

3. Click **Save**.

   Note: *It is recommended to immediately associate the device to the patient after creating the patient record to ensure that the auto search will find the patient during device download.*
