

Manage Patient Groups

Description:

Within each group is a list of patients that have met the criteria for the group and not yet been removed. Each group displays a summary of therapy from the 10 most recent days of available data for patients in the group and allows you to interact with the patient record.

To interact with patient records in a group:

1. To see a patient's summary information, click a patient's name.
2. You can also see more patient details or do common tasks by clicking one of the menus:
 - **Charts, Patient details, Prescription, Remote Assist, Notes** - links to a patient file
 - **Create report** - displays the report dialog box
 - **View recent logs** - displays recent patient logs (ie, reasons on why patients are in the group, interactions on when the patients were added and removed from the group)
 - **Mark as reviewed** - removes the patient from the group
 - **Add note** - displays a dialog box and provides an option to remove the patient from the group.
